Frequently Asked Questions:

Q: Where can I access data for all jobs supported by U.S. exports, by destination?

A: The data file and corresponding report [Sd\ShS\[ST W on our website at http://www.trade.gov/mas/ian/employment/index.asp](http://www.trade.gov/mas/ian/employment/index.asp).

Q: Why are there only % countries with Jobs Supported by Total Exports figures?

A: Services trade data is only available for % countries, and this statistic is needed to calculate the number of jobs supported by total exports.

Q: Can I add jobs supported by services figures from several countries together to create a custom jobs-supported figure for a specified region?

A: Yes, for countries with available services data. However, note that because of limited services data, if the custom region contains destinations without services export detail, the number of jobs supported by exports is likely to be underestimated.

Q: Can I add jobs supported by goods figures from several countries together to create a custom jobs-supported figure for a specified region?

A: Yes, the figures are additive. For example, to see how many goods exports destined for NAFTA countries supported U.S. jobs, add 1.31M to .95M to arrive at a total of 2.26 million jobs that were supported by 2014 U.S. goods exports to NAFTA countries.
